

Know where your customers & risks are located

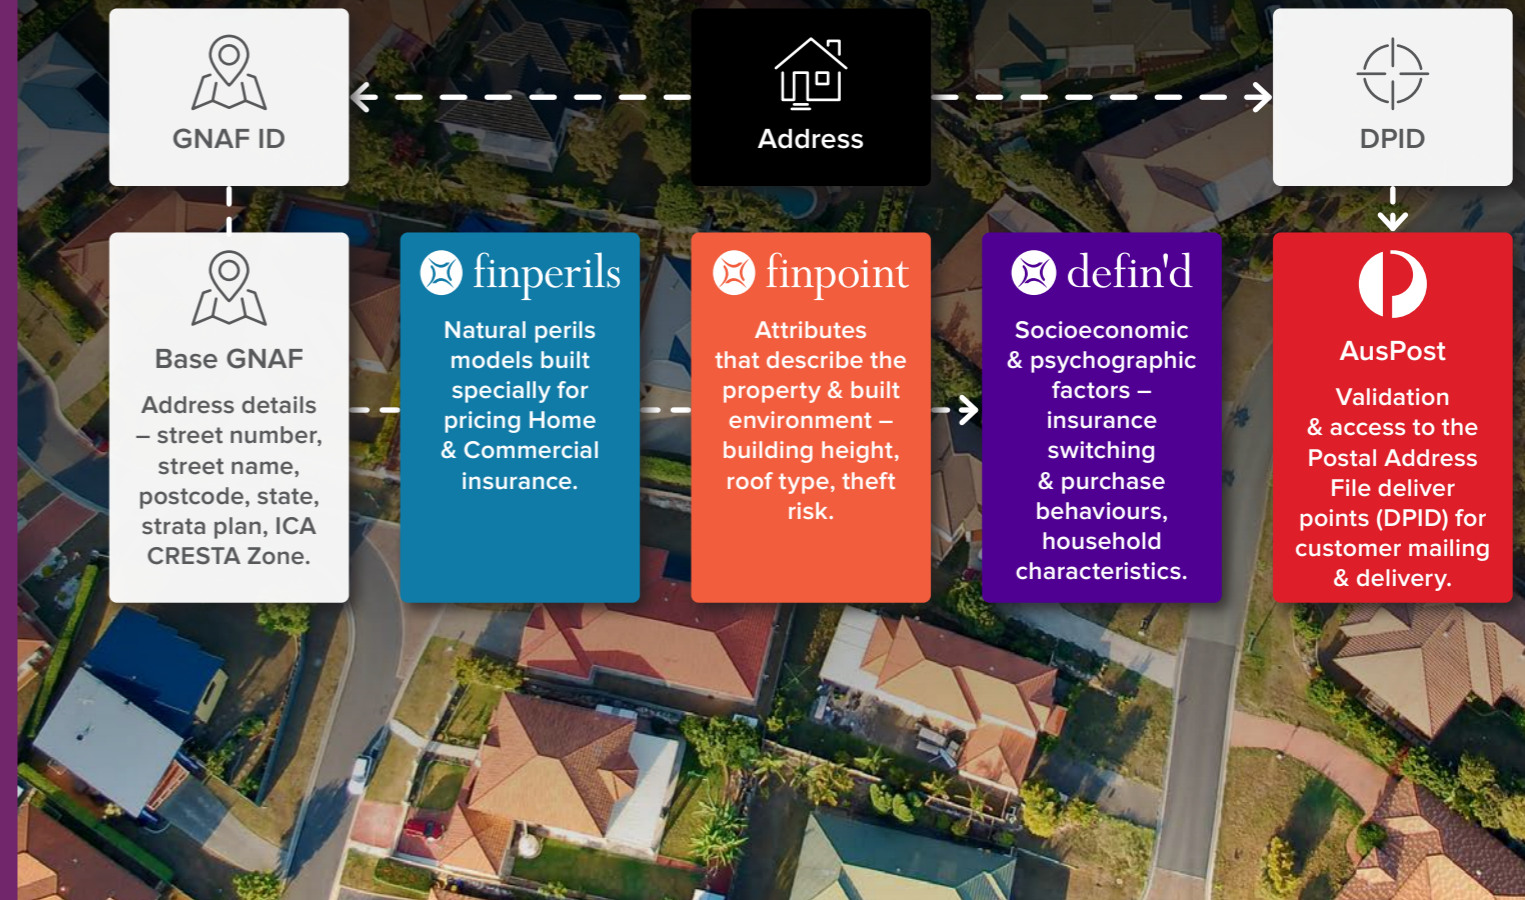

Finaddress is an API address validation solution providing quick access to quality customer address data to better understand where your customers are and understand information about that location via Finity's proprietary products. Finaddress enables you to quickly interrogate natural perils risks, access building and surrounding built environment information, and understand customer profiles to build your analytic capabilities.

Benefits

-  Access rich location based information including geospatial, environmental and socioeconomic data
-  Real time and batch mode address validation functionalities
-  Competitive pricing with 'pay for use' data quota
-  Plug and play API solution that integrates easily with different platforms and rating engines
-  Technical support with help from Finity's leading data experts

How it works

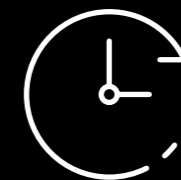

Fast, accurate & secure

Accuracy

Finaddress is AMAS-approved by AusPost to ensure high level of accuracy in address validation and returning real-time results.

Uptime

We aim for a 99% uptime and uninterrupted access, with access to support from Finity data and technology experts when you need it.

Speed

Quick API response times with a response rate of under one second to return real-time address validation results.

How businesses are using Finaddress

A strata underwriter did not have location rating at an address level nor store their risk locations in a standardised way. Finaddress was integrated into their new rating engine, allowing their brokers to locate the strata properties easily, attaching on validated address and strata plan information. Finaddress also enabled them to access to Finperils easily to underwrite and price for their risks at an individual address level, strengthening their overall pricing capabilities.

About Finity

Finity's unrivalled depth of actuarial and strategic expertise has inspired a range of cutting-edge products focused on practical commercially aware solutions that add value to your business.
